

# How many pregnant women receive unnecessary anti-D prophylaxis?

## PrenatalDetect RHD

from Devyser Genomic Laboratories

Devyser Genomic Laboratories offers a proven, highly sensitive and accurate test<sup>1</sup> for non-invasive screening of fetal Rhesus D (RhD).

40% of Rh-negative mothers are carrying an Rh-negative fetus and would be exposed to unnecessary treatment with potential risks.<sup>2</sup>

With our test results, physicians can ensure that only mothers that need anti-D prophylaxis, receive it.

### Personalized treatment

Empowers patients to decide on the testing and treatment they want during pregnancy.

### Non-invasive

Sample collection from gestation week 10 and a single EDTA blood tube is all that is needed.

### Saves time

Avoid multiple visits to the care provider for injections.

Non-invasive  
blood draw

PrenatalDetect RHD test

Reduce  
unnecessary  
prophylaxis
